2022-2023

Frontend developer
(React/Redux/Typescript/JS)

 :2014-2019

Bachelor, Engineer (Mechanical engineering)

 :2010-2013

Mechanical technician
(Technological equipment for machine-building production)

KEVLICH NIKOLAJ

FRONTEND РАЗРАБОТЧИК

Results-driven Frontend Developer with 2+ years of expertise in building and optimizing Single Page Applications (SPAs) using **React**, **Redux**, **Next.js** and **TypeScript**.

Proficient track record in improving performance and code quality, implementing complex form validation (**React Hook Form**, **Zod**), and effectively managing application state (**Redux/RTK/Thunk**).

Adept at creating reusable UI components, collaborating with designers on UI/UX best practices, and integrating with RESTful APIs.

Passionate about optimizing code quality, delivering measurable results, and continuously learning emerging technologies.

WORK EXPERIENCE

FRONTEND DEVELOPER

(January 2022 – Present)

 [Somegram](#) [code](#)  click

Developed in a team of 9

Role: Team Lead

A social network similar to Instagram, featuring profile setup, post creation, image handling, chat communication, and paid services

 [Training Complex](#) [code](#)  click

Developed in a team of 4

Designed for question-and-answer card-based learning, allowing users to create their own decks or use existing ones

 [Task Flow](#) [code](#)  click

Developed in a team of 1

An application for creating, editing, deleting, and displaying tasks and to-do lists.

 [Network Communication](#) [code](#)  click

Developed in a team of 1

A social network web application where users can add friends and chat.

KEY TASKS

Authorization Flow: Implemented registration, login, and password recovery functionalities.

Form Handling and Validation: Developed input form processing and validation.

Custom Hooks and Components: Created custom hooks and React components.

Pagination, Search, Sorting, Filtering: Implemented pagination, search, sorting, and filtering.

Server Interaction: Managed REST API and CRUD operations.

Routing: Handled navigation, private routes, and redirections.

File Uploads: Developed file upload functionalities.

Modals: Managed modal windows and their behavior.

Error Handling: Centralized error processing and display.

Testing: Wrote unit tests using Jest.

Refactoring: Optimized code, reduced duplication, and fixed bugs.

Performance Optimization: Used memoization with React.memo, useMemo, and useCallback.

Team Collaboration: Utilized Git, GitHub, and GitFlow for teamwork.

Architecture: Implemented (UL, BLL, DAL) using Feature-Sliced Design (FSD) principles
